SOOS CREEK PUMP STATION D AND PIPELINE PROJECT

January 2005

New regional wastewater facilities to serve the growing population

As part of its mission to protect public health and the environment, King County is upgrading and improving its regional wastewater facilities to provide capacity to support planned growth, consistent with the state's Growth Management Act.

King County to Build New Wastewater Facilities

The project involves siting and building Pump Station D and about 20,000 feet of sewers from Pump Station D to a connection with the county's existing Southeast 277th Street Interceptor Sewer in Kent.

Pump Station D, to be built on about 1 acre, will have a capacity of 10 million to 26 million

gallons per day. The new pipelines will range from 10 inches to 48 inches in diameter. These facilities will be built within the project area highlighted on the map below. The exact locations have yet to be determined.

We hope you'll come to the meeting to share your ideas and comments.

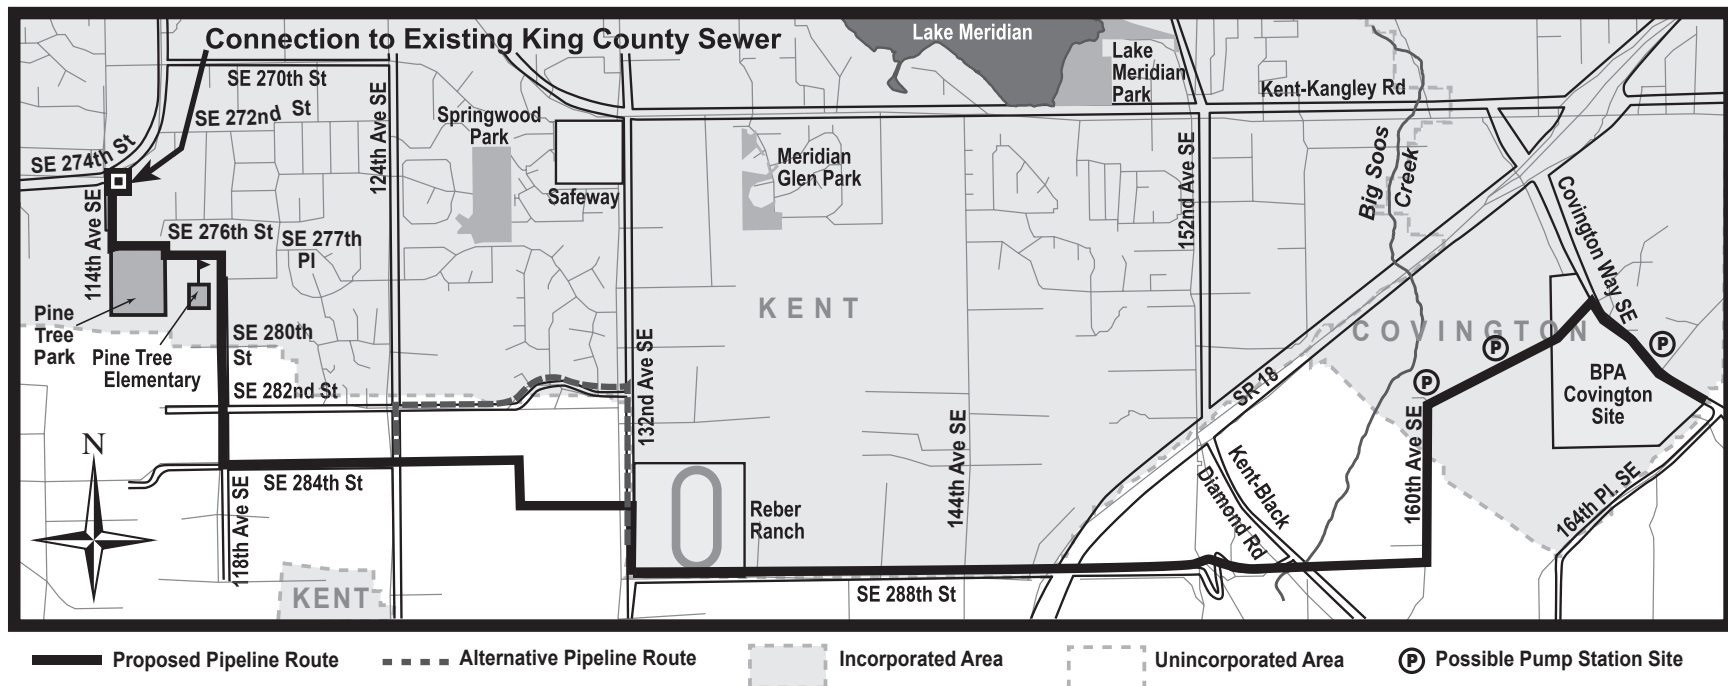

Representatives of King County met with local jurisdictions and hosted a community open house on Oct. 13, to present information and get public comment on three alternative pipeline corridors and criteria for evaluating them. Following technical analysis and screening, King County selected a preferred pipeline corridor.

Come to the Community Open House on Feb. 10!

6:30 – 8:30 p.m.
(presentation at 7 p.m.)

Covington Elementary
17070 S.E. Wax Rd.
Covington, Wash.

- Learn more about the project!
- Review the preferred pipeline corridor and the reasons for its selection.
- Review potential sites for Pump Station D.
- Share your ideas and questions.

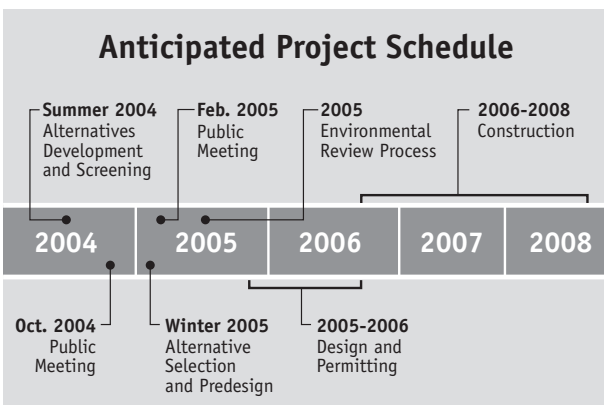

.....
King County is committed to being a good neighbor. We will work closely with local jurisdictions and the public to minimize the impacts of these facilities while protecting public health and the environment.
